

Intimate Partner Violence: Attributes of Victimization, 1993-2011

This book examines nonfatal intimate partner violence, including rape or sexual assault, robbery, aggravated assault, and simple assault committed by the victims current or former spouse, boyfriend, or girlfriend. It focuses on the attributes of intimate partner victimization as measured by the type of crime, type of attack, whether the victim was threatened before the attack, weapon use by the offender, victim injury, and medical treatment received for injuries. The book presents these characteristics as measures of the seriousness or severity of the incident. For example, victimizations involving a physical injury are considered more severe than those without a physical injury.
