

## The Creation Story: Reconciling Science with Religion

The analysis of the creation story as told in Genesis demonstrates that the description written by Moses 3,500 years ago is among the most ignored parts of Holy Writ. The author presents irrefutable proof of that story's accuracy--which we have come to ignore at our own peril. He also presents compelling evidence that the story is not a scientific treatise, but actually an elegant poem of praise to God for God's incredible planning of our ecosystem. Moses, who for 40 days was instructed by God on Mt. Sinai, describes the sequence of the Creation Story exactly as scientists are now discovering it happened. We would do well to heed this biblical description of how our world came into being--and our implied obligations to its Creator. Rather we exclude this insight from our schools and replace it with armed police to keep our children safe. Instead of lamenting the dwindling of the church's influence on our society and the accompanying decay of our culture, the author gives us two upbeat and simple suggestions that believers could do to reverse this trend.
