

# SHTF Root Cellar: Secrets to Building Your Own Natural Refrigerator Under the Ground

Root cellars were the first refrigerators. They can keep fruits and vegetables good all year long. They keep food 40 degrees cooler than the temperature in the summer. In the winter, they will keep the food just above freezing. They are not that hard to make. They don't take up a lot of space, even if you have a small garden. Root cellars are also good for storing wine, cider, beer, and other beverages.
