

Lost Star of Myth and Time

The myth and folklore of ancestral peoples around the world hints at a vast cycle of time, with alternating Dark and Golden Ages. Plato called it the Great Year. Long believed to be a fairytale, there is now new astronomical evidence to show it has a basis in fact. Moreover, because it is caused by the acceleration of our Sun around another star, we learn that the Earth should soon be carried into a region of space that will have a beneficial affect on our atmosphere, nudging mankind into a higher age of consciousness. Lost Star of Myth and Time weaves together some of the latest archaeological evidence with cutting-edge astronomy to reveal a history of the world that finally fits with myth, folklore and the archaeological record. While this book explores some of the most interesting aspects of a once advanced civilization that covered the Earth, it is really about what happens to the Earth and consciousness as our solar system moves through space in the mysterious motion known as the precession of the equinox. This astronomical phenomenon has since Newton been attributed to local gravitational forces wobbling the Earth's axis. Lost Star now shows us in no uncertain terms that the Earth's axis does not change orientation relative to objects inside the solar system at the same rate that it changes orientation to objects outside the solar system, meaning precession must be due to our Sun's binary motion around another star. Chapter by chapter it becomes clear that ancient cultures knew of precession, used it as the clock of the ages, understood it to be due to the solar system's motion through space, and realized this subjects the Earth to a cycle of waxing and waning stellar influences. It is these forces that affect our magnetosphere, ionosphere and indirectly create the larger seasons of the Great Year. As you will see this not only gives cause for a major rethink of human history and potential, but indicates

we are approaching a tipping point in the awakening of consciousness.
